

INTERLOCKING CASSETTE PANELS CASSETTE PANELS (FOR WIDER PANELS)

ZINC

Year completed: 2016

Architect: IRP Architects

Custom Creations

Initially composite aluminium was selected for this project, however during the design process it was changed to zinc.

It became apparent to the owner and IRP Architects that zinc would be better suited to the house than applied paint on account of its naturally weathered surface and texture. The zinc would also provide more options for the custom install using ZC Technical's cassette system.

Proven profiles, precious metals

After working through an extensive range of colour combinations, blue-grey Rheinzink was chosen for all soffits. Neutral VM quartz-zinc was used for the flat walling.

The VM Zinc interlocking panels for the feature pop-out sections were created in autumn red, a gorgeous tone that will allow the metal's texture to remain visible.

The client's love of the products inspired them to choose ZC Technical to install all gutters, fascias, downpipes and a rainwater head in VM quartz-zinc to minimise maintenance.

Lifelong value

The careful choice and quality install of such striking elements will ensure that the exterior ages gracefully. Nestled into the hillside and built to last, The Gap residence stands in timeless harmony with its surroundings.
