

## SINGLE LOCK STANDING SEAM ALUMINIUM

**Year completed:** 2015

**Builder:** Home Builder

**Architect:** Kevin O'Brien Architects

**Size:** 200 m<sup>2</sup>

### Custom Creations

The owners of this West End residence wanted to renovate, extend and modernise a traditional Queensland worker's cottage without compromising the existing architecture. They required a very crisp looking façade that appeared flat without oil canning.

### Proven profiles, precious metals

A single lock standing seam system was perfectly suited to achieving continuous cladding that melded traditional style with a contemporary edge.

We used zinc grey textured aluminium to deliver regular cladding with no oil canning in line with the client's wishes.

### Lifelong value

The sharp, contemporary façade will age gracefully and gives the beholder the impression that the structure continues infinitely.

“ Our architect specified Standing Seam Cladding for our major renovation to a Queensland workers cottage in Highgate Hill. With little knowledge of this product, we contacted a number of suppliers with Simon from ZC Technical being one.

One thing that stood out from other suppliers/ installers, was Simon was prepared to come to site and explain what options we had. This made us very comfortable in dealing and awarding the job to ZC Technical. ”

**Peter & Wendy Ashburn**

# WEST END RESIDENCE

“ The quality of ZC Technical's work is excellent and we would have no hesitations in recommending Simon and his crew. ”
